# ORCHIDS—CULTURAL DIRECTIONS

Orchids were never more popular than they are at present, due to the fact that they are, without question, the handsomest, the strangest, and the most lasting flowers in all the vegetable kingdom.

Most private collections have some representative of this queenly class of plants, while the florists are well convinced of the fact that, to keep pace with the times, they must grow Orchids the demand for which is daily increasing.

Orchids are the most easily grown plants of any, if a few common-sense points are observed. The cardinal points are: First, plenty of air at all times; during the Summer months have the ventilators open night and day. Second, an abundance of light without being exposed to the full sun, which is too strong, but have the glass lightly shaded. Third, an abundant supply of water when watering, permitting the plants to dry out well occasionally so as not to get them sour. Fourth, place the plants from 18 inches to 4 feet at the most from the glass.

A night temperature of 55-60° and correspondingly higher during the day will suit the greatest number of Orchids.

A great many Epiphytal Orchids need a season of growth and rest. The growing season commences when the plants begin to grow, when they should receive the maximum amount of moisture.

As soon as the growth is completed the plant should receive less water, so as to ripen the pseudo-bulb and thus insure good flowering. Under no circumstances, however, should water be withheld so as to cause the plant to shrivel. When the buds appear, give plenty of water, so as to develop the flower to perfection. After the flowering season is over the plant generally begins to show signs of growth, when it should receive potting or rebasketing if needed; if not, then only a top dressing of sphagnum moss, and the plant may be started into growth again. It may be well to mention in connection with the foregoing that there are exceptions to this treatment, our climate being much more favor-

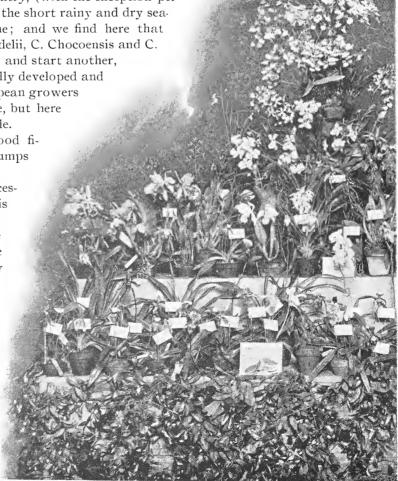

able for Orchids than that of Europe as a whole, notably for Orchids found on this hemisphere or such species as are found in Central and South America. In particular, the Colombian Cattleyas have scarcely any resting season in their own country, (with the exception perhaps of C. Schræderæ,) on account of the short rainy and dry seasons, both of which are never extreme; and we find here that such Cattleyas as C. Trianæ, C. Mendelii, C. Chocoensis and C. Percivaliana will finish their growth and start another, sometimes two, all of which will be fully developed and ready for the flowering season. European growers would look indignant at such culture, but here we find it both necessary and profitable.

The best potting material is good fibrous peat and sphagnum moss, with lumps of charcoal and potsherd intermixed.

Firm potting is absolutely necessary as no Orchid will grow well if it is loosely potted. In repotting care should be taken not to disturb the roots, rather break the pots; while the baskets may be taken apart carefully or set into a larger one and material worked around. Avoid overpotting and do not disturb the plants unless necessary.

With these general cultural directions any beginner will be able to grow Orchids and reap a rich harvest of their exquisite flowers.

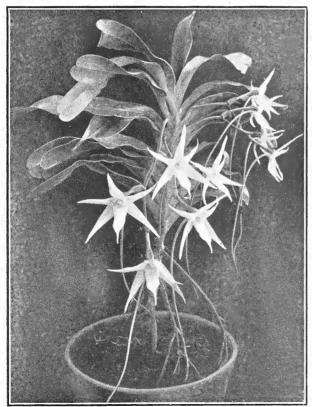

For further and more detailed information we respectfully advise the procuring of some book on Orchids. A list of such books will be found on page 47 of this Catalogue.

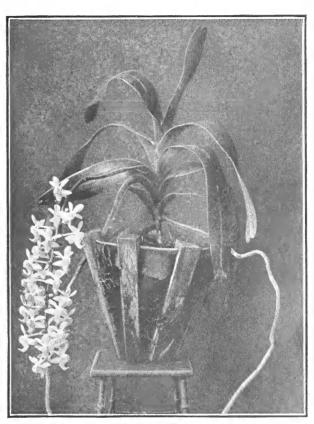

# Classified and Descriptive Price List of Orchids

Calanthe Summitense

# SUMMIT. NEW JERSEY

Cattleya Percivaliana. See page 12

# **CATTLEYA**

The Cattleya is an exceptionally interesting and desirable subject of the Orchid family. With its closely allied genus, Lælia, it ranks among the most popular, showy and useful of all Orchids. The large, exquisitely beautiful and often sweet-scented flowers are produced in ever-changing and attractive combinations, and being admirably adapted for decorative work at all kinds of functions, they are in constant demand. Cattleyas are indigenous to the Western Hemisphere, South and Central America being the regions where they abound. The species vary in habit, but practically in all the flowers are borne on upright scapes. They are easy of culture and thrive in a medium temperature and moist atmosphere, with plenty of light and ventilation. Pots, pans or baskets in which they are placed should be well drained; use good fibrous peat and sphagnum moss, together with small pieces of broken charcoal and crocks. The plants require shading during bright Summer sunshine, though it must be remembered that they love the light, and a dark, gloomy house should therefore be avoided.

	of rose color, en-
	tire lip rose-pur-
	ple, suffused with
	buff, yellow and
	rose, with crisp-
	ed margin of rose
	color\$20.00

C. Mossiae reflexa. Flowers
large, with reflexed sepals and
petals of rose
color; lip very
large, somewhat
flat, upper part
of which is orange-yellow, extending half way
down, lower part
suffused with
dark rose veins,
radiating from
the center .... 15.00

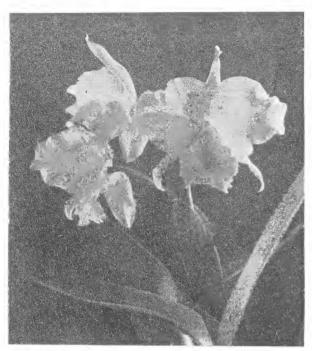

C. Mossiae reflexa aurea. Shape of flowers the same as pre-

what smaller, greater part of which is yellow, except the lower part, which has a heavy longitudinal vein from which radiates a few lateral veins of purplish color.. 15.00

Cattleya labiata alba. See page 10

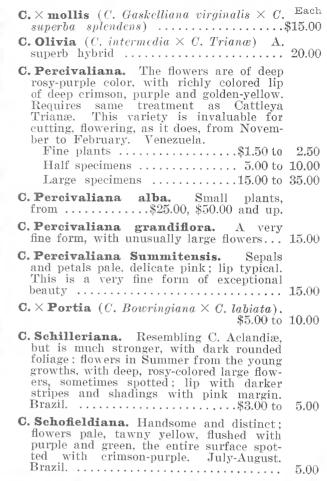

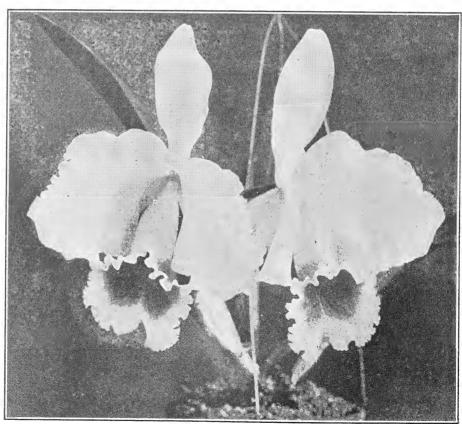

Cattleya X Portia

C. Mossiæ rosea. A very pretty and dis-
tinct form, sepals and petals rose col-
ored, half of lower part of lip of same
color, with small purplish veins in cen-
ter, upper part yellow\$15.00

**C. Mossiæ Sunset.** Flowers very fine and large, lip gorgeously colored with yellow, purple, crimson and rose................ 10.00

- C. Mossiæ splendens. Flowers very large, of deep rose shades, lip crenulated. margined with rose; the upper sides buff yellow, rest of lip purple, rose and crimson. \$20.00 each.
- C. Mossiæ "The Star."
  Flowers extra fine and large. Sepals and petals thrown forward, giving the flower a very neat and distinct appearance: of rose color, lip of a very pretty purple, suffused with yellow and rose, encircled by a broad, wavy margin of lightest rose. \$20.00 each.
- C. Mossiæ trium phans. Large, fine
  form of rose color; lip
  very large and open,
  almost flat, nearly entirely orange and buff
  yellow, except the center, which is purple,
  radiating irregular purplish veins. \$15.00 each.
- C. Mossiæ Reineckiana. \$35.00 to \$50.00 each.
- **C. Mossiæ Wagneri.** (Syn. alba.) \$50.00 to \$150.00 each.

Cattleya Schræderæ

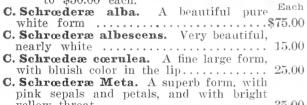

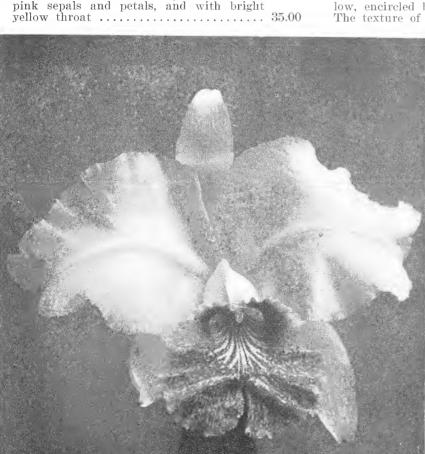

### CATTLEYA-Continued

C. Schræderæ. Of this superb Cattleya we have a very large stock. Owing to its beautiful, large, sweet-scented flowers, appearing about Easter time, it is a very useful variety for cutting. We have for years spent money, time and labor in opening up an entirely new region where this Cattleya grows in luxuriance. The type is far superior to the old-time Cattleya Schræderæ. and while the colors run, as a whole, light, the variation in our type is considerable, a great number of plants bearing flowers highly colored. Some of the finest named varieties, both here and in Europe, have sprung from this type. \$2.50 to \$5.00 each.

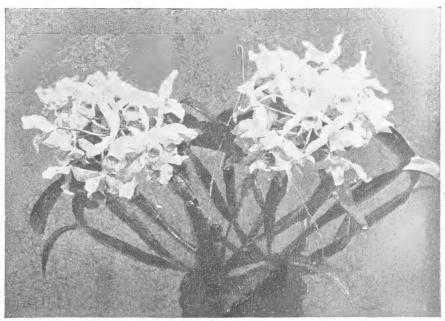

Half specimens. \$10.00 to \$15.00 each.

Large specimens. \$20.00 to \$50.00 each.

Cattleya speciosissima

Cattleya Skinneri

C. Schrederæ lilacina. A distinct fine Each form of lilac color all over.....\$35.00

C. Schrederæ Hercules. This is an extraordinary form; in fact, we believe it is the finest Cattleya Schræderæ in cultivation. The flowers are unusually large, of French white, throat of the lip is yellow, encircled by a broad band of white. The texture of the flowers is entirely different from the type,

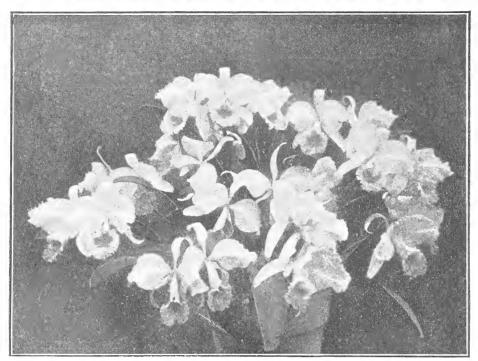

inasmuch as the se-pals and petals are thick, resembling and feeling to the touch like a piece of white cloth. The flowers last on the plant for weeks. Awarded firstclass certificate by the Massachusetts Horticultural Society, March 23, 1906. One plant only. Price on application.

C. Skinneri. Flowers 4 to 5 inches in diameter, rose-purple, disk of lip white, bordered with a broad zone of deeper purple, peduncles 5 to 18 flowered. March-April. Central America ....\$1.50 to 2.50 Specimens.. 5.00 to 10.00

C. Skinneri rosea. A pretty light rose-colored form of the preceding ..... 10.00

C. speciosissima. Flowers very large, blush-rose; enjoys a light, airy place in the house. Flowers, mostly during February and March, although a number of this variety will bloom at almost any time during the year. Venezuela ...\$1.50 to 3.00

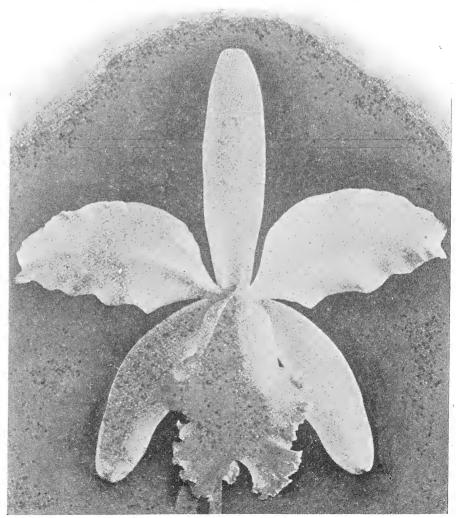

Cattleya Trianae

- CATTLEYA-Continued
- C. superba splendens. A most beautiful species with fragrant blossoms of a deep rich purplish rose. This species requires more heat than most Cattleyas and plenty of water, Summer months. Venezuela and Colombia. \$3.00 to \$5.00 each.
- C. × Thayeriana (C. intermedia × C. Schræderæ alba). A most vigorous grower with great diversity of varieties, no two being alike. Awarded a silver medal by the Massachusetts Horticultural Society and a first-class certificate by the Lenox Horticultural Society. \$7.50 to \$15.00 each.
- C. × Thayeriana superba. A superior form of the preceding. \$25.00 each.
- C. Trianæ. The most useful Orchid in cultivation, flowering in Midwinter, when flowers are most in demand, and remaining a long time in perfection. Flowers 5 to 8 inches across, white, rose, lilac or purple, shaded and blended. December-April. Colombia. \$1.50 to \$5.00 each.
  - Specimens. \$10.00 to \$20.00 each.
- Extra large specimens. \$25.00 to \$50.00 each. **C. Trianæ alba.** \$50.00 to \$100.00 each.

- C. Trianæ atropurpurea. An exceptionally fine variety. The entire flowers are of almost crimson color. \$25.00 to \$35.00 each.
- C. Trianæ aurantiaca. \$10.00 each.
- C. Trianæ Backhouseiana. Fine variety. \$35.00 each.
- C. Trianæ delicata. \$10.00 each.
- C. Trianæ Mrs. Edw.
  S. Harkness. One of the finest variety discovered for many years. The sepals and petals are pure white, lip somewhat fringed, of a beautiful and delicate pink mauve resembling somewhat Cattleya Amesiana. The throat is a bright orange yellow, making the flowers appear very striking and distinct. Price on application.
- C. Trianæ virginalis. \$25.00 each.
- **C. velutina.** Brazil. \$3.50 to \$5.00 each.

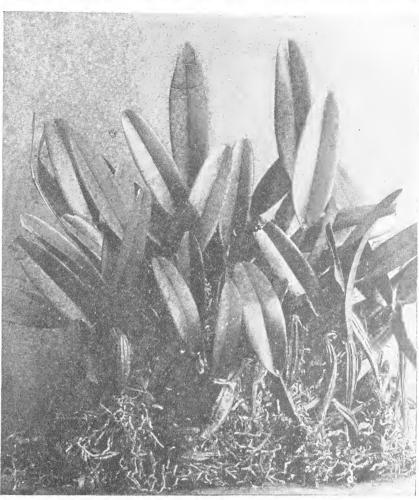

Cattleya X Thayeriana

# SUMMIT. NEW JERSEY

CATTLEYA - Continued
C. Walkeriana. A very fine dwarf species, with large rose-colored flowers; lip of a richer rose than the other parts, with a tinge of yellow. Flowers during the Winter months, lasting several weeks in perfection. Brazil \$2.50
C. Warneri. Flowers large and open, 6 to 8 inches across, delicate rose color, shaded with amethyst-purple. April-May. Brazil \$2.50 to 5.00

CVDEODODITIMA	F 00

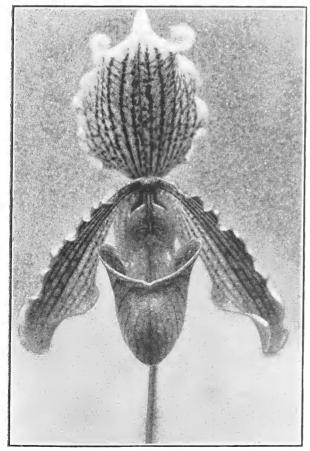

Nothing in the entire Orchid family offers such a great number of species, varieties and hybrids as do the Cypripediums. The number of hybrids is becoming almost unlimited, and the variations in forms and colors are almost bewildering. It is difficult to imagine anything in the plant line more beautiful, varied and interesting than a collection of Cypripediums; they are a constant source of interest to the cultivator from one end of the year to the other. The flowers when cut will outlast anything else we know, and nothing can compare in beauty and distinctiveness to a vase of cut Cypripediums of various kinds. They are the easiest of all Orchids to grow, with few exceptions. Pot culture is preferable, and the material should consist of fibrous peat and sphagnum moss, with

Pot culture is preferable, and the material should consist of fibrous peat and sphagnum moss, with plenty of drainage. Cypripediums do not require any resting season and therefore should be kept moist all the year round. A temperature of 55° to 65° suits them well, with plenty of light and ventilation and lightly shaded. All the plants quoted below are nice healthy plants, with from two to four

growths, according to kinds.

Dendrobium Cassiope

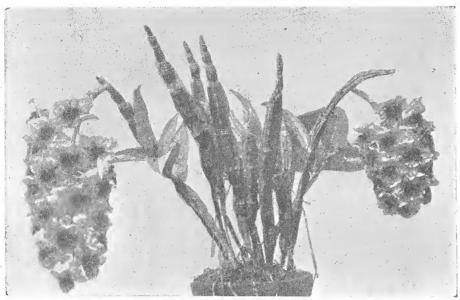

# **DENDROBIUM**

Dendrobiums are a genus of epiphytal Orchids containing many species of considerable horticultural merit. More than 300 in number, the species are distributed through the tropical countries of the Eastern Hemisphere, Australia, Japan, China, India and the Philippine Islands furnishing large quantities. Most of the commercial Dendrobiums are easily cultivated, and their brightly-colored, serviceable flowers are freely produced. In dealing with such an extensive genus, having so many different forms, it is but natural that the mode of culture should vary somewhat, but their treatment can be understood and the desired result usually accomplished when it is borne in mind that as a general rule they require heat and abundance of moisture when growing, a season of cooler temperature and a reasonable exposure to air and light to ripen the growth, and a drier season to produce and mature the flowers, which are mostly large and showy, delicately colored and quite fragrant. In habit, the plants vary from the dwarf and tufted, about three inches in height, to species with pseudo-bulbs growing three to four feet high and lusty in proportion. A compost of fibrous peat and sphagnum moss, in equal parts, suits them best, and they should be grown in pans, hung near the glass.

## THE LAELIAS

- The Lælias are among our finest Orchids, and should occupy a prominent place in every collection.
- **L. acuminata** (rubescens). Flowers white. sometimes tinged with rose, on spikes 10 to 15 inches high; flowers during the Winter months and is very useful for cutting. Costa Rica ......\$1.50 to \$2.50
- L. albida. Flowers white and pale pink, veined with yellow, on many-flowered tall spikes. November to June. Mexico.... \$1.25 to
- **L. anceps.** Flowers 4 inches across on 2 to 6-flowered scapes, often 3 feet high; sepals and petals rosy blush; lip deep purple. November-January. Mexico.... \$1.00, \$2.00 and 3.00
- **L. anceps** (Palest pink). This is a new strain of this species, which we have secured, but at the time this catalogue goes to press we are unable to classify them, only having flowered a few imported plants. They are very choice and distinct. \$5.00, \$10.00 and 15.00
- **L. anceps Dawsoni** .....\$3.00, \$5.00 and 10.00
- **L. anceps var. Sanderiana.** Sepals and petals pure white, with a rose-purple blotch on the front lobe of the lip. December-February. Mexico ...\$3.00, \$5.00 and 10.00

## **ODONTOGLOSSUM**

The plants included in this section of coolhouse Orchids form a group of unusual beauty and utility. The genus, closely related to Oncidium and Miltonia, embraces about 100 species originating in the higher regions of the Andes, from Mexico and Guatemala to Colombia and Bolivia. Odontoglossum crispum, probably the most extensively grown Orchid, is particularly admired for its extremely handsome flowers and easy culture. A remarkable number of natural hybrids occur in the family, and intercrossing no doubt accounts in large measure for the size and horticultural value of the genus. With few exceptions, the Odontoglossum is found in extremely moist situations, where the annual rainfall is excessive and the temperature more or less even and cool throughout the year.

Odontoglossum citrosmum

Odontoglossum grande. See page 38

<b>ODONTOGLOSSUM Bictonense.</b> Flowers yellowish-green, blotched with chestnut-brown, with pale rose lip. Fall. Guatemala and Mexico\$1.50 to	
O. Cervantesii. Flowers 1½ to 2 inches across, white, with chocolate-red tangential streaks around	2.00
O. cirrhosum	3.50
O. citrosmum. This plant produces its long, pendulous spikes of fragrant lemon-colored flowers, sometimes flushed and dotted with pink; fine for exhibitions; remaining perfect for weeks. June-July. Mexico\$1.50 to	2.50
O. citrosmum album	5.00
O. crispum (O. Alexandræ). One of the most charming, beautiful and useful of all Orchids; flowers large, variable in colors, white frequently tinged with rose, and again blotched with red; borne on long, many-flowered, gracefully arching spikes. (See illustration of flowering spike on page 39.) March-May. Colombia \$1.50, \$2.50 to	5.00
O. Ehrenbergi. February.	2.50

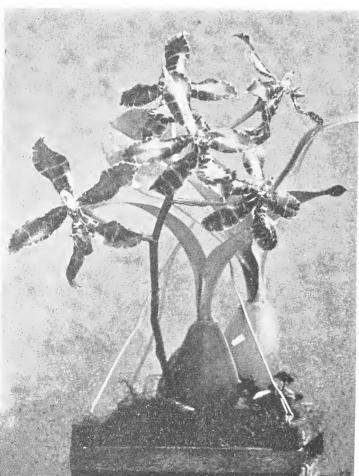

## LAGER & HURRELI

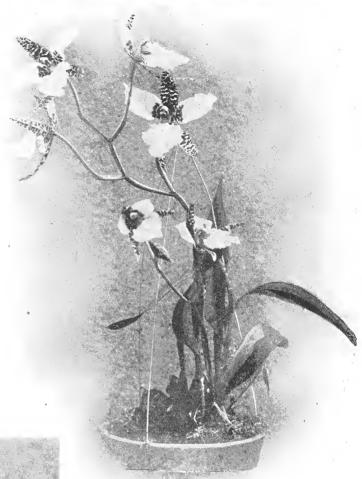

### ODONTOGLOSSUM-Continued

O. grande. This fine plant, known as the "Baby Orchid," flowers from September to December. The flowers are very large, cinnamon-brown and yellow. It is best grown in pots in fibrous peat and sphagnum in an average temperature of 55°. Guatemala. (See illustration,	
page 37.)\$2.50 to	
O. Hallii	5.00

Nicoticide. The most effective Insecticide we know for thrips, green fly, cattleya fly, red spider, etc. Per pint \$2.50, gallon \$15.00.

Fumigators for above, 75c. each.

Round Basket, Oak. See page 45

## Correspondence Solicited on Anything Pertaining to Orchids

In addition to the plants listed in this catalogue, we have always on hand a number of fine varieties which crop up from time to time, including a number of Seedling Orchids from fine crosses.

Estimates will be furnished on large quantities of Orchids, for stocking conservatories or greenhouses in any part of the country.

We have always a number of applications on our books from competent Gardeners and Orchid Growers whom we can recommend to parties requiring the services of such men.

# Books on Orchids

ORCHIDS, THE BOOK OF. By W. H. White, F. R. S. \$1.00.

The author of this book is orchid grower to Sir Trevor Lawrence, Bart., president of the Royal Horticultural Society of England, whose extensive collection of these plants is known to every orchid enthusiast. The author is therefore fully equipped to deal with the subject under consideration, and he has produced a handy little work of the most practical nature. The chapters on handling newly imported plants and the pottings of orchids in leaf soil instead of the old-time peat, are particularly instructive, as also are the directions given for watering, ventilating, building of houses in which to grow orchids, etc. Almost one hundred pages are devoted to the orchid genera, which are fully described, the subject-matter being interspersed with illustrations.

ORCHIDS, THEIR CULTURE AND MANAGEMENT. By W. Watson, Assistant Curator Royal Gardens, Kew, England. \$10.00.

Description of all the kinds in general cultivation. Illustrated by colored plates and numerous engravings. A well-printed book of 554 pages. A new edition of this book has just been issued, in which some additions have been made to the plants enumerated in the first edition, and corrections made with the aid of recently published botanical works. The book is also enhanced by the addition of 8 colored plates.

ORCHID GROWERS' MANUAL, THE. By B. S. Williams, F. L. S., F. R. H. S. Super Royal 8vo., gilt edge, cloth. 300 illustrations. \$10.00.

Contains 800 pages and descriptions of upwards of 2,500 species and varieties of Orchidaceous plants, together with their synonyms, also authorities for the names, the families to which the various genera belong, the flowering period, native country, and reference to figures, besides much more information. The most complete work on Orchids ever published.

ORCHIDACEOUS PLANTS, MANUAL OF. By James Veitch & Sons, England. Freely illustrated with woodcuts and maps. 2 vols. Cloth, 8vo. \$33.50.

Compiled to supply amateur cultivators of Orchids with an account of the principal genera, species and varieties in cultivation. Articles on the morphology of the flowers, structure of the plants, fertilization, hybridization, geographical distribution (with maps), classification, history of orchid culture, etc., and a list of orchid literature.

ORCHID CULTIVATOR'S GUIDE BOOK, THE AMATEUR. By H. A. Burberry. Profusely illustrated. Cloth, 8vo. \$2.50.

In plain, concise words the author gives easily understood instruction on all the important points belonging to every-day work in the culture and management of Orchids.

ORCHID STUD BOOK, THE. By Robert Allen Rolfe, A. L. S., and Charles Chamberlain Hurst, F. L. S. Price \$4.00.

An enumeration of Hybrid Orchids of artificial origin. With their parents, raisers, date of first flowering, references to description and figures and synonymy. With an historical introduction and 120 figures and a chapter on Hybridizing and Raising Orchids from Seed.
